

# TSFA LEVEL II PERMANENT BOTANICAL ASYMMETRICAL TRIANGLE DESIGN

**Permanent Botanical Gerbera Daises with Filler and Foliage**

# Asymmetrical Triangle Silk Design

Design created in 4"x 4" cylinder or 4"x 4" square with styrofoam insert.  
Styrofoam should be at least ¼" above lip of container

Cover styrofoam with sheet moss or faux foliage ribbon

Cover top of styrofoam with moss to camouflage mechanics

## Placement of First Three Insertions

### To Insert flowers and foliage stems into styrofoam base options:

Cut stems at a very sharp angle, insert and securely wedge in styrofoam

**For testing:** Must practice, so will know where the stems should be placed, as too many insertions will create problems in stabilizing stems in your final design.

# Stem Insertion Directions

Center line

First stem insertion is off center to the left, toward the back and perpendicular to counter. #1 flower is 15" to include container

Center line

Second stem insertion is off center to the right and placed at approximately a 40 degree angle, inserted radially toward center point of design. #2 flower is approximately 5 ½" tall including container

Note: facing of flowers:

#1 insertion faces up,

#2 insertion is almost full face forward

#3 insertions faces between #1 & #2

flowers

(Hint: this difference in these heights, separation of insertions and degree of movement is what creates depth within the arrangement)

Third stem insertion is off center to the left and placed at approximately a 45 degree angle, inserted radially toward center point of design. #3 flower is approximately 8" tall including container
